### DETAILED ACTION

Claims 1-9 are included in the prosecution of this application.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

**Claims 1-2 and 4-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Hughes et al (5322689).**

Hughes et al discloses a decongestant composition containing water, salt, alcohol, camphor, glycerin, menthol, and methyl salicylate (Note examples).

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**Claims 3, 8, and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hughes et al, cited above in view of Bryce-Smith (5622724) in further view of Pan et al (5912007).**

As set forth above, Hughes et al disclose a decongestant composition containing water, salt, alcohol, camphor, glycerin, menthol, and methyl salicylate.

Hughes et al does not teach zinc sulfate, n-acetyl-L-cysteine, or the composition in spray form.

Bryce-Smith teaches a "cheap" zinc sulfate nasal spray for treating the common cold. The reference discloses that zinc inhibits the common cold but has an objectionable taste and irritable (col. 2, line 11). Further, Bryce-Smith teaches the use of ethanol, camphor or methanol as flavor or odor enhancing agents. The reference suggests combining zinc sulfate with other medications.

Pan et al teach a medicated composition for the upper respiratory tract and N-acetyl-cysteine as an expectorant agent.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of Hughes et al, Bryce-Smith, and Pan et al since the references teach treatment for cold-like symptoms or respiratory ailments and clearing the passages. One would be motivated to do so since Pan et al teach N-acetyl-cysteine as an expectorant agent, Bryce-Smith teaches the advantages of using zinc sulfate and combining it with other medications and flavor/odor enhancers as seen in Hughes et al's comprehensive decongestant composition, thus the combination of the active agents would have an additive effect.
